--	--	--

On clicking the C3 => C3 Generation

Screen / Image	Function Description	API & Response Behavior

On clicking the C3 Generation 	When the user clicks on C3 Generation, the system requests the list of generated C3 reports for the selected company. The system fetches month-wise C3 records including wage details, contribution amounts, penalties, payment, submission, and finalization status. If records are available, they are displayed in a tabular list view. If no records exist, an appropriate message is shown to the user.	API Called: Get https://c3testapi.digitalnoticeboard.biz/api/C3/GetC3Reports/{CompanyId} Request Parameter: CompanyId (Path Parameter) 200 OK – Success Response: - C3 generation list is returned - Data displayed in grid/table format Response Message: “Data Get successfully.” Failure / No Data: - Error message shown if API fails - “No C3 records found” shown if list is empty
--	---	---

On clicking the C3 => C3 Generation

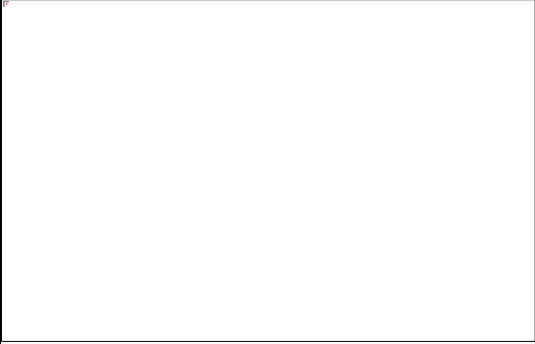

Screen / Image	Function Description	API & Response Behavior

On clicking the Generate C3 Button  	When the user clicks on Generate C3, the system checks whether a C3 for the selected month and year has already been submitted. If a C3 has already been submitted for the same month, the system does not create a duplicate C3 immediately. Instead, a confirmation modal popup is displayed asking the user whether they want to generate a new C3 with another Schedule (Schedule 5). If the user clicks Yes, the system proceeds to create a new C3 with another schedule. If the user clicks Cancel, the process is stopped and no new C3 is generated.	API Called: POST https://c3testapi.digitalnoticeboard.biz/api/C3/LoadEmployee?CompanyId=177&monthno=12&Year=2025&isNilReturn=false Request Parameters: CompanyId (177), monthno (12), Year (2025), isNilReturn (false), and payFrequency (W / M / E2W / 2M) are sent to generate the C3 for the selected company and period. Success Response (200 OK): - status = true - Message indicates C3 already exists for the selected month - Data payload returned for employee contribution details Modal Message Shown: “C3 has already been submitted for this month. Do you want to create a new C3 with another schedule 5?” Click Yes : System generates a new C3 using another schedule (Schedule 5) Click No : Modal is closed and C3 generation is stopped Click Generate C3 for Other Month :User is redirected to select a different month and year
---	--	---

On clicking the C3 => C3 Generation

Screen / Image	Function Description	API & Response Behavior
On clicking the Save Button 	When the user clicks the Save button, the system first checks whether a C3 has already been created for the selected Company, Month, and Year. If no existing C3 is found, the system directly saves the C3 without showing any confirmation popup. If a C3 already exists, a confirmation modal popup is displayed informing the user that saving will overwrite the existing C3. If the user selects Yes, the system proceeds to save and overwrite the existing C3. If the user selects No, the save operation is cancelled and no data is saved.	API Called (Check Existing C3): GET /api/C3/check_C3Created?Year=2025&Month=12&CompanyId=177 If C3 NOT created: - No modal popup shown - Save API is called directly If C3 already created: - Confirmation modal popup shown - User decision required If Click Yes: Save API is called and existing C3 is overwritten API Called /api/C3/SaveNContinue Request parameter: CompanyId, monthno, MonthName, Year, IsLevyExempt, AllEmployeeList_List, CmbPayPeriod, H_Id, ListHavingItems, OrderKey, OrderName, TextChanged, UserID, User_Name, bonusObj, c3FilePath, holidayPayDates, isImportC3file, isNilReturn, isSave, is_preview, isrecordEdit, schedule_no Click No Popup is closed and C3 is not saved

On clicking the C3 => C3 Generation

Screen / Image	Function Description	API & Response Behavior
On clicking the Edit C3 Generation Button 	User clicks Edit on a C3 record to modify employee wage and contribution details for the selected month. System fetches C3 header details and linked employee records for editing. Pre-fills C3 header summary and employee-wise wage data on the edit screen. Editing is allowed only if C3 is not submitted and not paid. --	--	--

On clicking the C3 => Report

Screen / Image	Function Description	API & Response Behavior

On selecting Import Submitted C3 (Based on Period) 	When the user selects Import Submitted C3 (Based on Period), the Period From and Period To fields become enabled. The user selects the required month and year range and clicks the Import Submitted C3 button. On clicking Import Submitted C3, the system attempts to download previously submitted C3 data for the selected period and company. If submitted C3 data exists for the selected period, the system downloads and imports the C3 data successfully. If no submitted C3 data is available for the selected date range, the import is not performed and an error message is shown to the user.	API Called: GET /api/C3/btn_DownloadSubmittedC3_Click Request Parameters: FromMonth ToMonth Year endYear company LoginID Password1 UserID Response: status: false statuscode: 400 Message: Code: ECS1031 C3 data not found for the date range
---	---	---

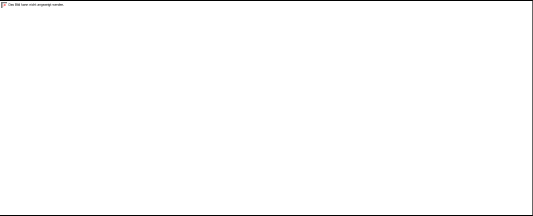

On clicking the C3 => Report

Screen / Image	Function Description	API & Response Behavior

On selecting Import Latest Submitted C3 	When the user selects Import Latest Submitted C3, the system attempts to import the most recently submitted C3 data for the selected company. This option does not require period selection and always targets the latest available C3. On clicking Import Latest Submitted C3, the system fetches the latest submitted C3 data from the server. If the latest C3 data does not already exist in the system, it is imported successfully and displayed in the report list. If the latest C3 data for the same month and year already exists, the import is blocked to prevent duplication.	API Called: GET /api/C3/btn_ImportLastC3_Click Request Parameters: companyId loginID password1 userId Response: status: true statusCode: 200 Response: status: false statusCode: 400 Message: Data for this month and year already exists.
--	---	---

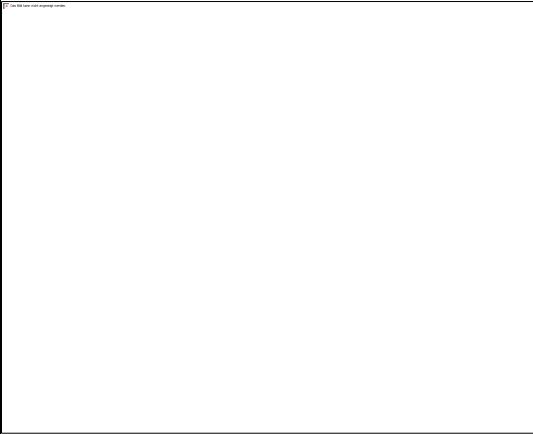

On clicking the C3 => Import C3 File

Screen / Image	Function Description	API & Response Behavior

On clicking the Import C3 File Menu 	When the user clicks on Import C3 File, the system requests the list of Import C3 File reports for the selected company. The system fetches month-wise Import C3 File records including wage details, contribution amounts, penalties, payment, submission, and finalization status. If records are available, they are displayed in a tabular list view. If no records exist, an appropriate message is shown to the user.	API Called: Get https://c3testapi.digitalnoticeboard.biz/api/C3/eports/{CompanyId} Request Parameter: CompanyId (Path Parameter) 200 OK – Success Response: - Import C3 File list is returned - Data displayed in grid/table format Response Message: “Data Get successfully.” Failure / No Data: - Error message shown if API fails - “No Import C3 File records found” shown if list is empty
--	---	--

On clicking the C3 => Import C3 File

Screen / Image	Function Description	API & Response Behavior

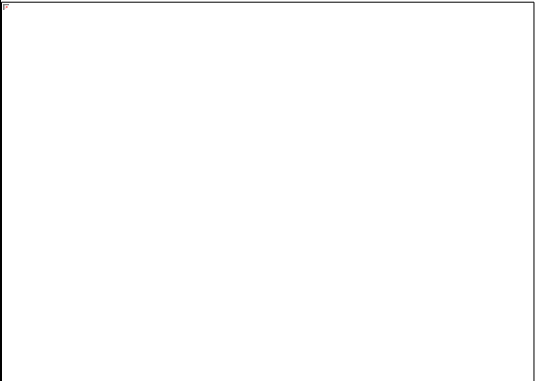

On clicking the Upload C3 File 	When the user clicks on the Import C3 File menu, the Import C3 File screen is displayed. The screen shows: • Choose File input • Upload C3 File button • Download Template button • Close button When the user clicks on Download Template, the system downloads a dummy/sample C3 template file that follows the required EC3 format. This template can be used as a reference to prepare a valid C3 file. When the user clicks on the Close button, the Import C3 File section is hidden and no action is performed. When the user selects a valid C3 file using Choose File and clicks Upload C3 File, the system uploads the file and starts processing it. If the uploaded file is valid and processed successfully, the system parses employee data, wages, bonuses, holiday pay, and footer totals. The imported data is displayed for review in the C3 generation screen. If the file format is invalid or does not meet EC3 guidelines, the upload is rejected and an error message is shown.	API Called: POST /api/C3/UploadC3File2 Payload (Form Data): companyId userId file (binary) Response: status: true statusCode: 200 message: "C3 file processed successfully" Response: status: false Error message displayed
---	--	---

On clicking the No Working Director => NW Director

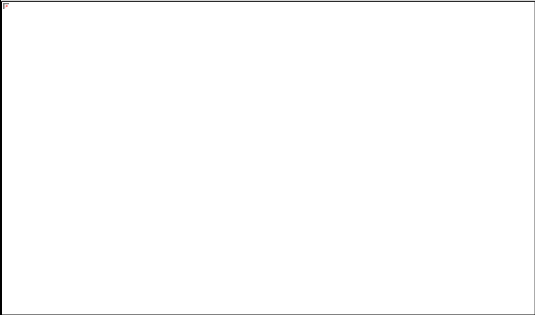

Screen / Image	Function Description	API & Response Behavior
On clicking the NW Director 	When the user clicks on the Non-Working Director menu from the left panel, the system loads the list of all non-working directors associated with the selected company. If no non-working director exists for the company, an empty table is displayed with no rows.	PI Called: GET /api/NonWorkingDirector/NonWorkingDirector_List?CompanyId=177 Data is returned in a list format and bound to the table Response: status: false message : No record found of nw director list

On clicking the No Working Director => NW Director

Screen / Image	Function Description	API & Response Behavior

On clicking the Add Non Working Director  	When the user clicks Add Non-Working Director, the system opens a form to add a new non-working director. The form displays only the following fields: • Social Security Number (SSN) • Date of Birth • First Name • Middle Name (optional) • Last Name When the user clicks the Get button, the system validates the entered SSN, Date of Birth, and Name details. The system attempts to fetch employee details based on the entered information. If valid details are found, employee data is displayed on the screen. If details do not match, data is not displayed. When the user clicks Save, the system saves the fetched non-working director details. When the user clicks Save, the system saves the fetched non-working director details. When the user clicks Cancel, all entered and fetched data is discarded.	API Called: GET /api/NonWorkingDirector/Get_NWEmployeeDetails_SSB_Click request Parameters: Txt_SSN, DOB, First Name, Middle Name, Last Name, username, password Success Behavior: • Data returned and shown on screen • Save and Cancel buttons enabled Error Response: status: null message: IP details not found for given values data: null API Called: Save Non-Working Director API Success Response: • Data saved successfully • Confirmation message shown Failure Response: Error message displayed
---	--	---

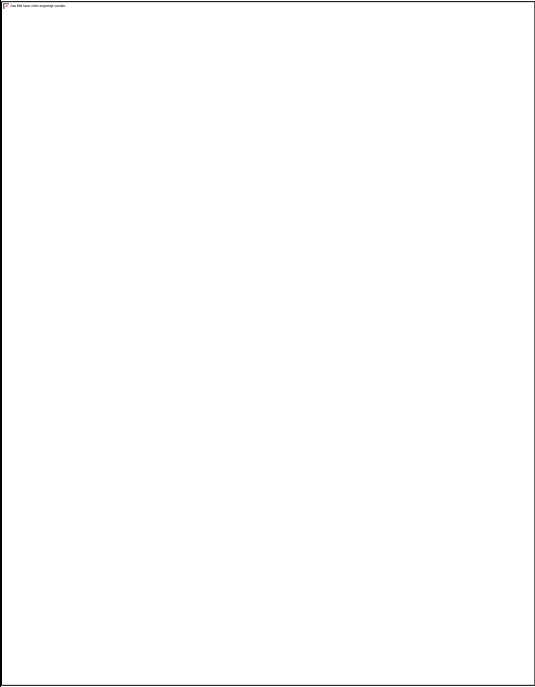

On clicking the No Working Director => NW Director

Screen / Image	Function Description	API & Response Behavior
On clicking the Import Button 	When the user clicks the Import Director button, the system attempts to import Non-Working Director details based on the selected company and the last submitted C3 data.guidelines, the upload is rejected and an error message is shown. The system sends company and user credentials to validate and fetch Non-Working Director records. The system checks whether any Non-Working Director exists for the company from the latest submitted C3 data.	API Called: GET /api/NonWorkingDirector/ImportDirector Request Parameters: companyId = 177 LoginId = mmts Password = Pnc68\$@@ UserID = 188 Data is fetched from previously submitted C3 records (No Wages data). API Response: status: true Data is imported and shown in the list API Response: status: false data: null

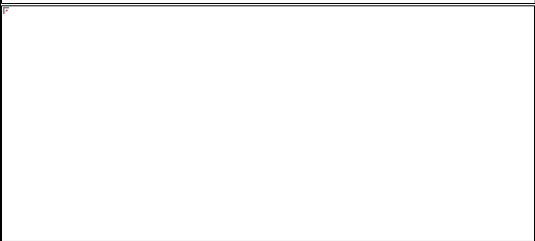

On clicking the No Working Director => NW Director

Screen / Image	Function Description	API & Response Behavior

On clicking the Administration => Logged In History

Screen / Image	Function Description	API & Response Behavior

On clicking the Logged In history Menu 	When the user clicks on the Logged-In History menu under Administration, the system displays a list of user login and logout activities for the last 7 days by default. The user can filter the records by selecting a From Date and To Date and clicking the Search button. The user selects From Date and To Date. On clicking Search, the system calls the API with the selected date range. If logoutTime is null, it is displayed as "N/A". No Data Found If no records are available for the selected date range, the system displays:	API Called: GET /api/Administration/LoggedInHistory Request Parameters: companyId, isSelfEmployed, RoleId, pageNumber, pageSize, fromDate, toDate Success (status: true) Login history records are displayed. Success (status: true) If the API call fails, the system displays an error message.
---	---	---

On clicking the Contact Us

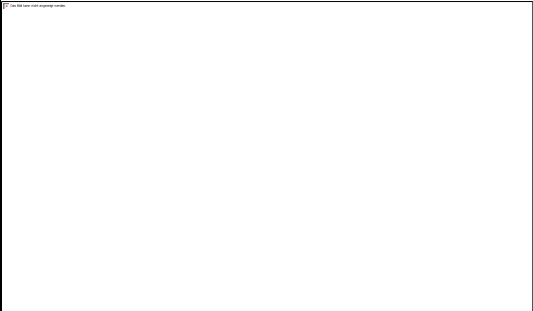

Screen / Image	Function Description	API & Response Behavior

On clicking the Submit Button	When the user clicks the Submit button, the system validates the entered details and sends the message to the administrator successfully.	API Called: Post /api/Administration/SaveContactUs
	The system validates that the Description field is not empty. If validation passes, the SaveContactUs API is called with the entered details.	Request Parameters: userId, companyId, employer, regNo, description Success (status: true) The help request is submitted successfully. “The message has been sent successfully.” Failure (status: false) The help request is not submitted. An error message is displayed to the user.

Self Employee

On clicking Self Employee Dashbaord

Screen / Image	Function Description	API & Response Behavior

On clicking the Dashbaord Menu 	When the user clicks on the Dashboard menu, the system loads the self-employee dashboard screen. At this moment, the application automatically calls the Load Dashboard API to fetch the latest dashboard data related to the selected company. The dashboard displays a summarized view of the user's self-employment contribution status, including unpaid amounts, pending remittances, and month-wise contribution details. This helps the user quickly understand pending actions and payment obligations.	API Called: Post GET /api/SelfEmployee/load_dashboard Request Parameters: CompanyId Success (status: true) Data is available. The dashboard displays: Failure (status: false) No data available. The dashboard shows a "No record found" message..
---	---	---

On clicking Self Employee Dashbaord

Screen / Image	Function Description	API & Response Behavior

On clicking the Edit Button 	When the user clicks on the Edit button for a contribution record, the system checks if the H_Id exists. If a valid H_Id is found, the application fetches the contribution details and redirects the user to the Edit Contribution page. If no valid H_Id is provided, the user remains on the dashboard, and a message is shown: “No record found to edit.”	API Called: Post GET /api/SelfEmpContribution/EditListingSelfContribution Request Parameters: H_Id companyId Success (status: true) Data is available. The dashboard displays: Failure (status: false) No data available. The dashboard shows a “No record found” message.. Response Behavior: Success (status: true) - Data found: Fields populated on edit page. Failure (status: false) - No data found: Show message “No record found to edit”, do not redirect. Server error / API fail - Show error toast: “Failed to load record”, stay on dashboard.
--	--	--

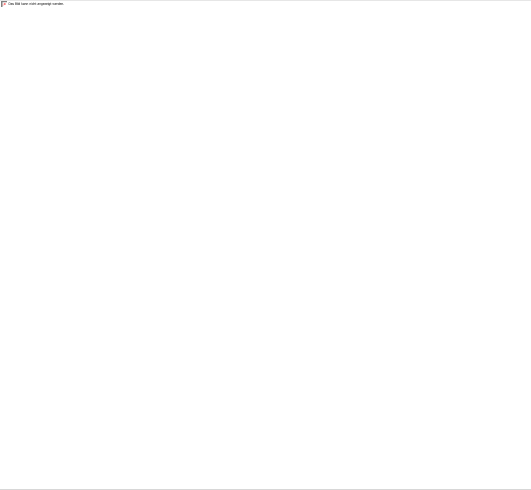

On clicking Self Employee Dashbaord

Screen / Image	Function Description	API & Response Behavior

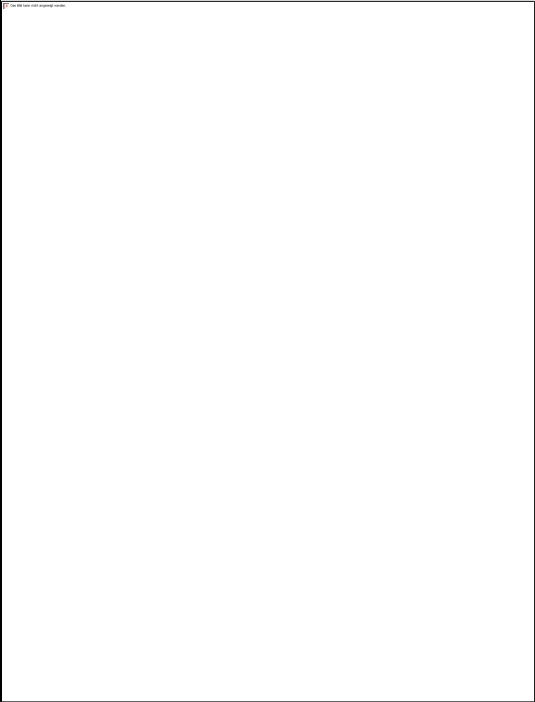

On clicking the Preview Button	When the user clicks on the Preview button for a contribution record, the system calls the Preview API to fetch the contribution details. If the returned data is valid/correct, a modal popup is displayed showing all relevant contribution details for review. If the returned data is invalid or missing, the modal is not shown, and an error or “No data found” message is displayed.	API Called: Post GET /api/SelfEmpContribution/ReprtsdataSelfAndDashboard Request Parameters: month year SEC3ID Success (status: true) Data is valid → show modal popup with contribution details. Failure (status: false) Data missing / invalid → do not show modal, display message No data found Show error toast: “Failed to load preview”, modal is not displayed
--------------------------------	--	--

On clicking Self Employee Dashbaord

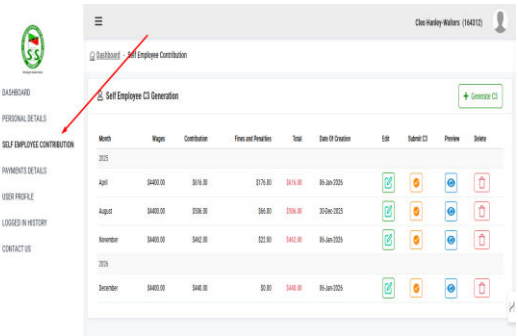

Screen / Image	Function Description	API & Response Behavior
----------------	----------------------	-------------------------

On clicking the Submit Button 	When the user clicks the Submit button, the system shows a confirmation dialog: “Are you sure you want to submit?” If the user clicks Yes, the form data is submitted via the Submit_C3_Click API. If the user clicks No, submission is canceled and no API call is made.	API Called: Post GET /api/SelfEmployee/Submit_C3_Click Request Parameters: SSNofEmp Headerid period_Month Period_year companyId UserLoginID User_Password userId Success (status: true) Submitted Self employeecontribution details. Failure (status: false) Not Submitted Self employeecontribution details.

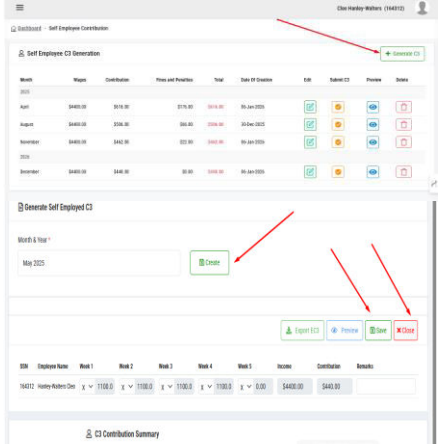

On clicking Personal Details

Screen / Image	Function Description	API & Response Behavior
On clicking the Personal Details 	When the user clicks on Personal Detail, the system navigates to the Personal Detail page and displays the user's existing personal information in editable fields. When the user clicks Save, the system validates the entered personal details and sends the updated data to the server to update self-employee information. If validation fails or server returns an error while updating personal details. When the user clicks Cancel, the system discards all unsaved changes made on the Personal Detail page. On Clicking The C3 Details => Test Payment History

Screen / Image	Function Description	API & Response Behavior
On clicking the Test Payment History 	User clicks Test Payment History to view all test payment transactions performed for verification and testing purposes. The system fetches test payment transaction details including transaction ID, payment amount, date, and payment status. This screen helps users/admins to track authorized and declined test transactions. Data is read-only and used for testing, audit, and validation purposes.	GET /api/Payment/TestPaymentTransactionHistory Request Parameters: None On Success: status: true message: Payment Success Response Data Includes: • Payment Gateway Transaction ID • Payment Amount • Transaction Date & Time • Payment Status (DECLINED / AUTHORIZED) • Transaction For (Production) Behavior: • DECLINED → Payment failed, amount not deducted • AUTHORIZED → Payment authorized, amount reserved On Failure: status: false with error message

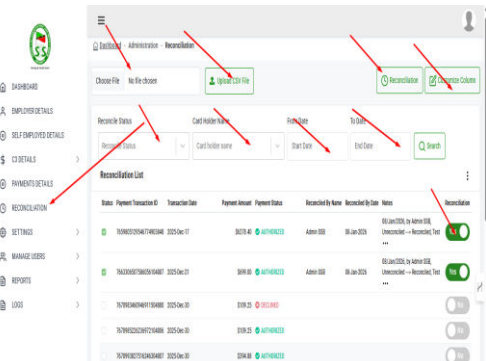

On Clicking The C3 Details => Test Payment Capture

Screen / Image	Function Description	API & Response Behavior
On clicking the Test Payment Capture 	User clicks Test Payment Capture to perform a test card payment using CyberSource configuration. The user enters card details, amount, and payment method to validate CyberSource integration in a test or production environment. The system fetches active CyberSource configuration details and processes the payment accordingly. This functionality is used to test payment gateway setup before enabling live transactions. Behavior: • Active environment (isActive: true) is used for payment processing • Test (Sandbox) environment is selected when enabled • Validates CyberSource credentials before transaction	API Called: POST /api/Payment/saveConfigCyberSource Request Parameters: • cardNumber • expirationYear • securityCode • cardHolderName • totalAmount • TransactionFor • c3HeaderId • userId • paymentMethod • secretKey, keyId, merchantId • saveCard On Success: status: true message: Details Found Response Data Includes: • Merchant ID • Key ID • Secret Key • Base URL • Environment (Production / Test) • Active configuration flag On Failure: status: false with validation or gateway error message

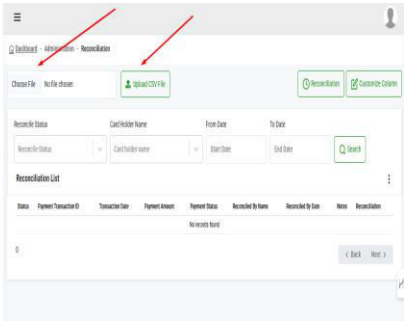

On Clicking The C3 Details => Payment Details

Screen / Image	Function Description	API & Response Behavior
On clicking the Payment Details 	When the user clicks on the Payment menu, the system fetches the payment transaction history for the selected company. Users can: - Filter records by From Date / To Date / Payment Status : Invalid Request/ Authorized/ Declined Select Type : Employer/Self-Employee - View company-wise and user-wise payment details. - View or download receipts for individual transactions. - Paginate through results if records exceed page size. - If no data exists, a message is displayed: “No payment records found for the selected criteria.”	API Called: GET api/Payment/AdminTransactionHistory Request parameters PaymentStatus FromDate ToDate CompanyId UserId types Success: Returns a JSON response with transactionList containing payment records and details. Data is displayed in the table for review. Failure / No Data: Message displayed: “No payment records found.” System shows error if API call fails.

On Clicking The C3 Details => Reconciliation

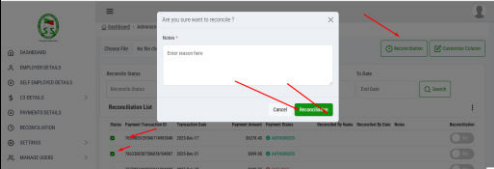

Screen / Image	Function Description	API & Response Behavior
On clicking the Reconciliation 	When the user clicks on the Reconciliation menu, the system fetches the Reconciliation history. The screen allows filtering transactions by reconciliation status, card holder name, and date range. Users can upload reconciliation files, search transactions, export results, and manually reconcile payments. Allows user to select a CSV file from the local system for reconciliation upload Uploads the selected CSV file to process reconciliation data Filters transactions by reconciliation status (Reconciled / Not Reconciled) Filters transactions by card holder name Filters transactions within selected date range Fetches reconciliation records based on selected filters Exports reconciliation list data into CSV format Exports reconciliation list data into Excel format	API Called: GET /api/Payment/GetReconciliationDataCyber Query Parameters: • pageNumber • pageSize Success: Returns a JSON response with Reconciliation containing Reconciliation records and details. Data is displayed in the table for review. Failure / No Data: Message displayed: “No Reconciliation records found.” System shows error if API call fails.

On Clicking The C3 Details => Reconciliation

Screen / Image	Function Description	API & Response Behavior
On clicking the Upload CSV File 	User clicks Choose File to select a CSV file from the local system for CyberSource reconciliation. The system allows only CSV file format for upload. Selected file name is displayed next to the Choose File button. User clicks Upload CSV File to upload the selected CSV file for reconciliation processing. The system validates CSV structure and required columns before processing the file. Uploaded CSV does not match the required column format. System displays validation error to the user Uploaded CSV contains all required columns in correct format.	API Called: POST /api/Payment/UploadCyberCsv Request Parameters (Form Data): - file (CSV – binary) - UserId Response: Status: True message: Successfully uploaded. Response: status: false message: Invalid CSV columns.

On Clicking The C3 Details => Reconciliation

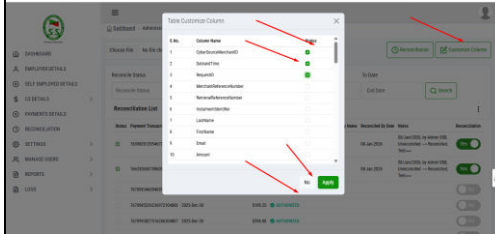

Screen / Image	Function Description	API & Response Behavior

On clicking the Reconciliation Button 	System validates that at least one row is selected. User selects one or more rows from the reconciliation list using checkboxes. Multiple rows can be selected at the same time (e.g., 2 rows). Only selected rows are eligible for reconciliation. User clicks the Reconciliation button to reconcile the selected transactions. A confirmation modal opens with the message “Are you sure want to reconcile?”. User must enter Notes (mandatory) describing the reason for reconciliation. When the user Clicks Cancel on the reconciliation confirmation modal, the modal closes and no reconciliation is performed. Selected transactions remain unchanged. User clicks Reconciliation after entering mandatory notes. Selected row IDs and reconciliation details are sent to the server	API Called: POST /api/Payment/UpdateReconciliationData Request Parameters (Form Data): id: Array of selected record IDs (e.g. [1, 2]) reasonsForReconciliation: User-entered Response: status: true message: Updated Successfully. statusCode: 200 Response: status: false Error message is displayed
--	---	---

On Clicking The C3 Details => Reconciliation

Screen / Image	Function Description	API & Response Behavior
----------------	----------------------	-------------------------

On clicking the Customize Column Button

User clicks Customize Column to customize the reconciliation table columns.

The system displays a modal listing all available columns with checkbox selection.

User can select or deselect columns based on minimum and maximum column visibility requirements.

This allows users to control which columns are visible in the reconciliation list.
User checks the checkbox to show a column and unchecks to hide a column.

At least the minimum required columns remain selected.

User clicks Apply to save selected column preferences.

When the user **Not** on the Customize Column confirmation modal, the modal closes and no reconciliation is performed. Selected transactions remain unchanged.

API Called:

POST /api/Payment/PostCyberSourceList

Payload Includes:

- columns (Selected column names)
- isActive (true for selected columns)
- userId

Response:

Status: True

message: Data saved successfully.

statusCode: 200

Response:

status: false

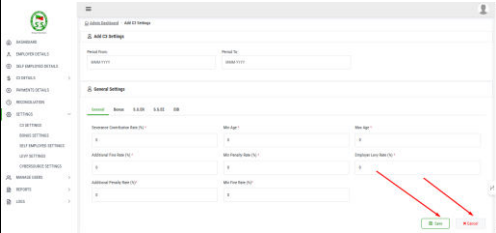

Error message is displayed

On Clicking The Settings => C3 Settings

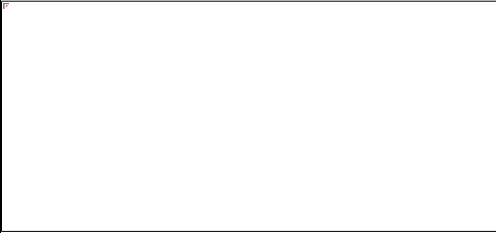

Screen / Image	Function Description	API & Response Behavior
On clicking the C3 Settings 	User clicks C3 Settings to view the configured C3 contribution, levy, severance, fine, and penalty rules applicable for the selected role. The system displays predefined C3 settings such as Severance, Social Security (EE & ER), EIB, fines, penalties, age limits, and employer levy. All values are shown in read-only mode when edit permission is not allowed. On the C3 Settings screen, the user can add new C3 settings, update existing C3 configurations, and delete C3 settings based on assigned role permissions.	API Called: GET /api/Settings/GetAllC3Settings Request Parameters: • RoleId Response: Status: True message: Data Retrieved successfully status code: 200 Response: Status: false Error message is displayed

On Clicking The Settings => C3 Settings

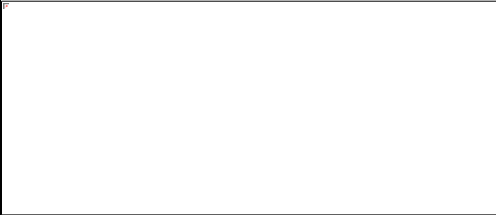

Screen / Image	Function Description	API & Response Behavior

On clicking the Add C3 Settings 	User clicks Add C3 Settings to create a new C3 configuration. The system navigates to /Settings/C3Settings and opens the C3 Settings form. User can enter contribution rates, limits, levies, fines, penalties, age limits, and effective date ranges. This functionality is used to configure statutory C3 rules for a specific period or role. User fills in all mandatory C3 fields User Saves the new C3 settings User Cancels adding C3 settings	API Called: POST /api/Settings/SaveC3Settings Payload includes all mandatory field keys Response: Status: True message: Data saved successfully. statuscode: 200 Response: status: false Error message is displayed
--	---	---

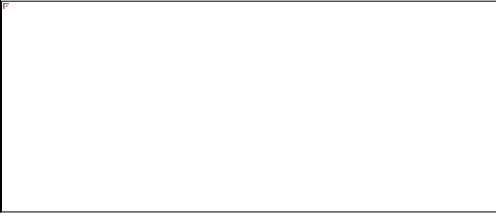

On Clicking The Settings => C3 Settings

Screen / Image	Function Description	API & Response Behavior
On clicking the Edit C3 Settings 	User clicks Edit C3 Settings Button to update C3 settings configuration. The system navigates to /Settings/C3Settings and opens the C3 Settings form. System opens the C3 Settings form in edit mode and pre-fills all existing values. User can update contribution rates, limits, levies, fines, penalties, age limits, and effective date ranges. All mandatory C3 fields must be filled before saving changes. User clicks Update to save the modified C3 settings. System sends the payload with all mandatory field keys. If a record already exists for the selected date range, update is not allowed.	API Called: POST /api/Settings/C3Settings Payload includes all mandatory field keys Response: Status: True message: C3Settings Record already exist for these dates! If no conflict exists, the C3 settings are updated successfully and saved. statuscode: 200 Response: status: false Error message is displayed

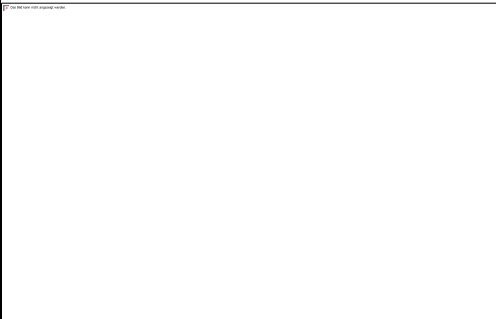

On Clicking The Settings => C3 Settings

Screen / Image	Function Description	API & Response Behavior
